

# TV3 BAGGING MACHINE

CODE 16-DARTR72N

Nursery potting machine suitable for filling large pots (from 10 to 35 cm) and high storage (2000 L) and discharge (100 L/min) capacities.

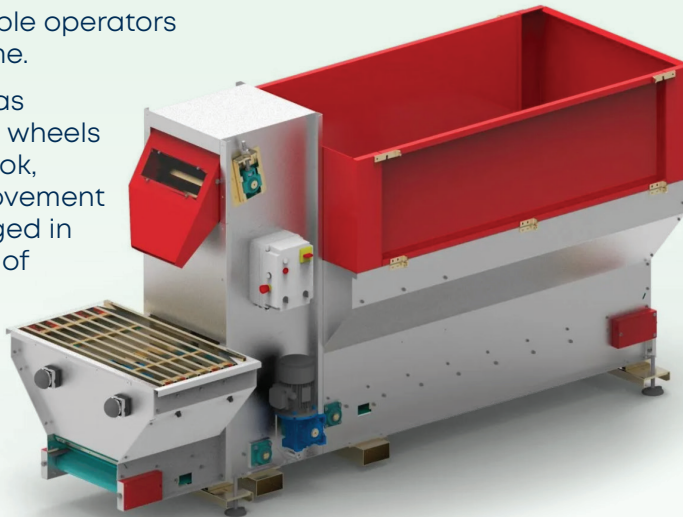

Machine designed specifically for potting operations in medium-sized nurseries, it is supplied as standard with:

- Single exhaust outlet
- Double drain spout (which allows you to fill 2 pots at the same time)
- Vibrating plane

The design has been studied with particular attention to ergonomics and safety: the spaces allow you to carry out potting operations with 2 hands, choosing to have the peat output continuously, or to be able to activate and interrupt it.

On request it can be equipped with a longer discharge mouth which will allow the same operations to be carried out on the ground: In this case the bowl will be positioned on a separate vibrating base (optional) and, depending on the customer's needs, combined with a sturdy roller conveyor to make slide the newly filled jar and make the work area easier for multiple operators at the same time.

Also available as options are the wheels and the tow hook, which allow movement if use is envisaged in different areas of the nursery.

## TECHNICAL DATA

**Weight**  
600kg

**Supply voltage**  
400V 3F+T 50Hz

**Installed capacity**  
1.6 kW

**Peat discharge capacity**  
100L/min.

**Pot diameter**  
10-35cm
