

GREENHOUSE INSTALLATION INSTRUCTIONS

FOR SOLARA AND ECLIPSE

by **PRIMEHORT**

www.toriumglasshouses.co.nz

Congratulations!

Thank you for purchasing a quality greenhouse, we trust your investment into gardening and outdoor living will return years of enjoyment!

Assembly

The steps for assembling this greenhouse are carefully laid-out in this manual, however the setup of any greenhouse can be complex. If you do not wish to assemble the greenhouse yourself, we recommend you engage a qualified installer. Contact our team for recommendations.

Important!

Please build the greenhouse according to the steps in this manual. Do not open all boxes at the same time. There are multiple parts, and we strongly recommend you check all parts have been included - please refer to the Parts List for each section. If there are any missing parts or damages, please contact us and we will arrange a replacement. There may be scratches or marks on aluminium-coloured greenhouses due to the production process, if you have any questions on this, please contact us.

Safety Advice

The greenhouse should be built in an area that is protected from wind and it should not be assembled in turbulent weather. It should also not be left partly assembled and at risk of exposure to poor weather. When built in accordance to the instructions, it can withstand strong winds, however you need to safeguard the doors and windows during violent storms. The manufacturer will not take responsibility for damages due to extreme weather conditions. If there is more than 10cm of snow on the roof, you need to remove the snow. Do not start a fire in the greenhouse! Assemble the greenhouse using safe tools only. When using a ladder, ensure it stands

safely on the ground (not propped against the greenhouse). Please use gloves when assembling the greenhouse to prevent cuts or injury. This greenhouse is designed to be installed in one place only (and not moved once assembled). Make sure it is anchored to the ground in accordance to the regulations.

Warning!!!

Risk of injury/death for infants and children

Due to a risk of choking, please do not let children play with the packaging. During assembly of the greenhouse there will be many small pieces and sharp edges, so please make sure children stay within a safe distance. The product is not a climbing frame or playground, so children should be supervised. Do not stand on the greenhouse or pull yourself up using it as a support because it could collapse or fall. Ensure the product stands on solid ground. By disregarding this advice, there might be injuries or material damages.

Required Tools

For construction, you will need the following tools:

- 1 x cross-slotted screwdrivers PH 2
- 1 x fork wrench 10mm
- 1 x slotted screwdriver
- 1 x allen key 3mm (in the accessory bag for roof window)
- 1 x file
- 1 x ladder
- 1 x spirit level
- 1 x mallet
- 1 x measuring tape
- 1 x scissors/knife
- 1 x drill

Identification of Profiles

1. Examine the cross-section to determine the profile shape.
2. Measure the dimensions to ensure accuracy.

Glazing Information

To avoid the plates getting scratched or damaged, do not tear off the foil right after unpacking.

The ISO-hollow-chamber-plates do always have two sides. One has UV-protection, which is stated on the plates. This is the outside.

Only remove the foil from the edges of the plates before assembling the greenhouse. Once assembly is complete, remove the remaining foil. Keep the plates protected from direct sunlight, as the foil may fuse to the surface, causing permanent marks and making it difficult to remove.

Use as Intended

Your greenhouse is designed specifically for gardening and plant cultivation. It is not suitable for storing chemicals, flammable substances, or other hazardous materials. Misuse may result in damage or safety risks, and we cannot accept liability for improper use.

Seals

Most wedge seals are supplied in double strands. Simply pull them apart to separate them into individual seals. Due to the effects of heat during manufacturing, the seals may expand slightly. To ensure a proper fit, cut the seals according to the following formula:

Door profile length \times 5% addition = Final seal length
Example: 748 mm \times 1.05 = 785mm

When installing, make sure the seals are properly compressed for a secure fit.

Location

To maximise light exposure and ample northern sunlight, choose a sunny location that isn't too shaded by buildings and trees. For vegetables, such as tomatoes, cucumbers, align your greenhouse

in an east-west orientation to maximise sunlight exposure during the cooler months and provide more consistent warmth. Flowers and pot-plants prefer a north-south orientation.

Water and Condensation

During heavy rain or storms, some leaks may occur. Additionally, condensation can form inside the greenhouse or within the hollow-chamber plates. This happens because the plates are not completely diffusion-proof, allowing humidity to enter as vapor, which may cause a foggy appearance. This is purely an optical effect and does not damage the plates, even in freezing conditions.

To minimise condensation choose the right location for your greenhouse and ensure regular ventilation to improve airflow.

Any water that accumulates inside the plates can drain through the plastic corner connectors. It is important to ensure proper drainage both inside and outside the greenhouse.

Care – Maintenance

- Use soft brushes and plenty of water to clean the greenhouse. Avoid using high-pressure cleaners, as they may cause damage.
- For heavier dirt, use mild soap rather than harsh chemicals like bleach, ammonia, or alkaline cleaners. Always follow the manufacturer's instructions when using cleaning products.
- We are not liable for any damage caused by unsuitable cleaners on aluminium or painted surfaces.
- Check screws, nuts, and bolts periodically and ensure they are tightened and lubricated regularly to maintain structural integrity and longevity.

Insurance

Please note that greenhouses may not be automatically covered under standard insurance policies. We recommend checking with your insurance provider to ensure proper coverage.

Sealing

While sealing is not strictly necessary, we strongly recommend sealing the joints between the profiles and plates to prevent water and dirt from entering. This helps keep your greenhouse cleaner for longer and makes maintenance easier.

- Use neutral cross-linked silicone for sealing.
- Permanently elastic sealing joints are considered maintenance joints and are not covered under warranty. They should be inspected regularly.

Attention: For sealing, you do have to use neutral cross-linked silicone, because otherwise your hollow-chamber plates might crack out of tension. A sealant cartridge is included in the package.

Disclaimer

We are not liable for damages to elements, people, or property caused by unintended use of this product or failure to follow safety instructions. PrimeHort Distributors Limited does not accept liability for objects stored inside the greenhouse. The end-user is responsible for ensuring the safety of the contents. Additionally, the manufacturer is not liable for damages resulting from improper assembly or extreme weather conditions.

Show us your Greenhouse in Action!

We love seeing our products in action. If you'd like to share a photo of your greenhouse, we'd be delighted to receive it. Ideally, please send digital images to: sales@toriumglasshouses.co.nz

Thank you for your support—we look forward to seeing your homegrown creations!

Foundation

Optional Extra – contact us for pricing information.

fig. similar

FOUNDATION A

foundation frame for digging (optional)

This is the easiest and safest way of foundation for your house.

Attention:

Do not assemble the frame in the beginning. You need to assemble it, while building the house!

The foundation frame is hooked into the groundprofile and screwed together in the corner using framing angles.

Note:

The foundation frame profiles are shorter than the groundprofiles of the house!

Set up with foundation frame

Dig a ditch, 10-12 cm deep, into the ground. In the edges, put a paving stone horizontally into the ditch, so the house can not subside. After that, you may put your house into the ditch and fill it up with soil.

You may now surface the soil with paving stones or terrace plates, so your house will not be soiled by mud, when it is raining heavily.

It also makes it easier to work around the house, for example when you are mowing the lawn.

FOUNDATION B strip foundation

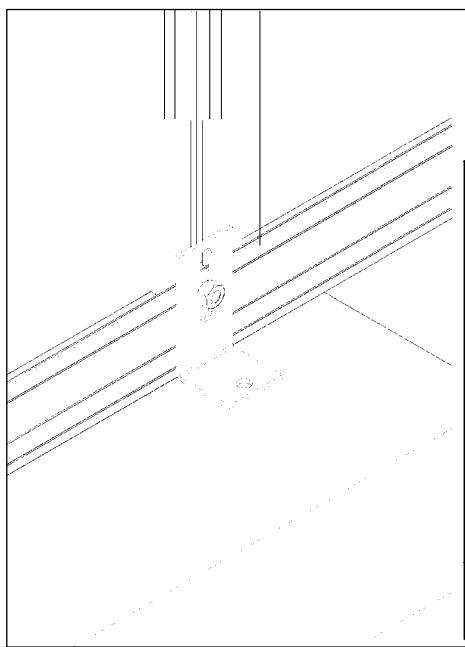

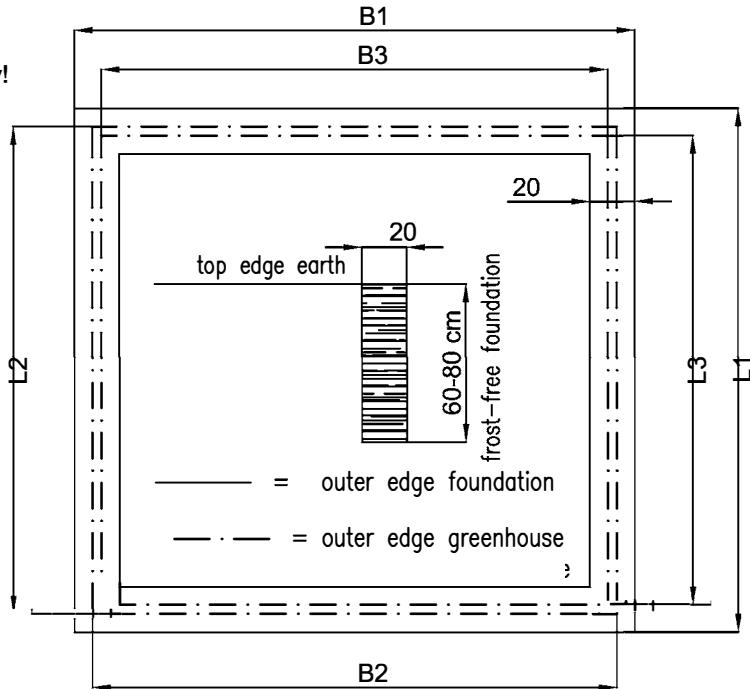

If you did not buy a foundation frame, you need to ground your house on a strip foundation.

Please make sure your foundation is done, like it says in the table below.

Also you have the possibility to do your foundation via kerbs.

Please make sure your foundation is done horizontally. After this you can fasten your house, using the angle of attachment (V15).

Screws and Plugs are not in the scope of supply!
